Description of Folding Box Glued Tab Miller Type FR 40

The milling attachment can be mounted in any folding box gluer because of its small dimension, no matter whether the folding box is made of solid, micro or corrugated board.

The thickness of the board may be up to 5 mm. The width of the milling tool 4 – 5 – 8 mm determines how wide the gluing can be.

The milling depth is infinitely variable from 0 to approx. 1 mm.

Merely these settings make it possible to remove only the varnish or cellophane layer with the gluer running at maximum capacity and to assure subsequently a perfect gluing of the folding boxes.

Specification:

Drive: Pneumatic motor (sound absorbing)
Output: 260 W
Speed: adjustable by air volume or air pressure,
max. 30.000 r/min. at 6 bar
Air consumption: max. 0.4 m³/min.

Dimensions approx.: l = 145 mm
w = 65 mm
h = 120 mm (without motor)

In order to keep free the folding box and the gluing fixture from the slight milling dust, suction can be done by means of the vacuum cleaner.
